Introduction

Congratulations, you are now in charge of a multimillion dollar company. You manufacture sensors, which you market and sell to other manufacturers. They put your products into the devices they sell. Your company was created when the government split a monopoly into identical competitors. As a monopoly, operating inefficiencies and poor product offerings were not addressed because:

- Increasing costs could be passed onto customers;
- Mediocre products would sell because customers had no other choices.

Although last year's financial results were decent, your products are getting old, your marketing efforts are falling short, your production lines need revamping and your financial management is almost nonexistent. Competition in the post-monopoly era means you can no longer ignore these issues. If you do, competitors with better products and/or lower prices will take your market share.

Practice Rounds

Practice Rounds allow you to organize workflow among the members of your company. You will begin to compete against the other companies in your simulation or, if you are in a Footrace competition, against a common set of computer-run companies.

During the Practice Rounds, you can experiment with your decisions in a competitive environment.

Decision Summary

The Decision Summary is a complete history of all team decisions. It will help you identify your decision-making strengths and weaknesses. The audit is available from two locations:

- From the Capstone Web Application, click Help in the menu bar; or
- On the Dashboard, click Reports on the left-hand menu, and then click the Decision Summary link.

Company success

The board of directors, shareholders and other stakeholders expect you to make the company a market leader. Successful managers will:

- Analyze the market and its competing products;
- Create and execute a strategy;
- Coordinate company activities.

Best of luck in running a profitable and sustainable company!

Industry Conditions Report

The information in your Industry Conditions Report will help you understand your customers. Your customers fall into different groups, which are represented by market segments. Customers within a market segment have similar needs. The segments are named for the customer's primary requirements such as:

- Traditional
- Low End
- High End
- Performance
- Size

The Industry Conditions Report lists market segment sales percentages and projected growth rates unique to your simulation. The Industry Conditions Report is published once at the beginning of the simulation.

Each simulation industry is unique. As your simulation starts, the Industry Conditions Report will outline the beginning business environment, including customer buying criteria. The Industry Conditions Report is available from your simulation Dashboard.

Buying Criteria

Customers within each market segment have different standards as they evaluate products. They consider four buying criteria: Price, Age, MTBF (Mean Time Before Failure) and Positioning

1. Price

Each segment has different price expectations. One segment might want inexpensive products while another, seeking advanced technology, might be willing to pay higher prices.

2. Age

Each segment has different age expectations, that is, the length of time since the product was invented or revised. One segment might want brand-new technology while another might prefer proven technology that has been in the market for a few years.

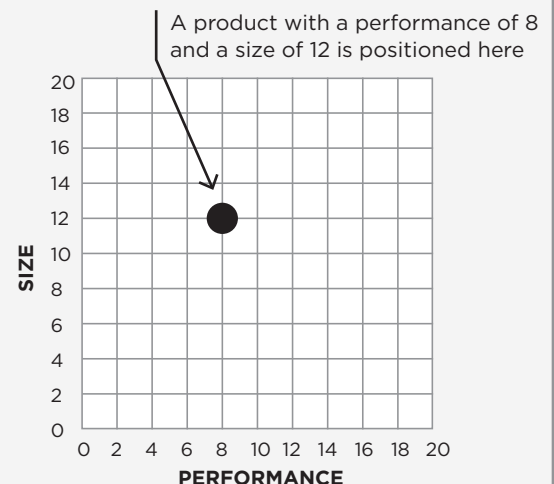

3. MTBF

MTBF (Mean Time Before Failure) is a rating of reliability measured in hours. Segments have different MTBF criteria. Some might prefer higher MTBF ratings while others are satisfied with lower ratings.

4. Positioning

Sensors vary in their dimensions (size) and the speed/sensitivity with which they respond to changes in physical conditions (performance). Combining size and performance creates a product attribute called positioning.

FIGURE 2.1

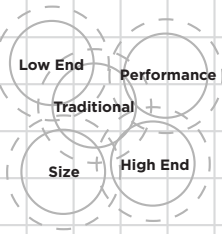

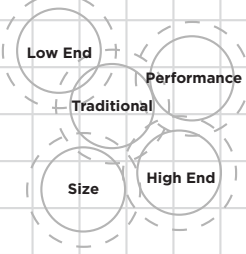

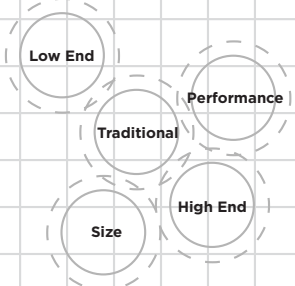

The Perceptual Map used in the Simulation: The Perceptual Map plots product size and performance characteristics.

Positioning is such an important concept that marketers developed a tool to track the position of their products and those of their competitors. This tool is called a perceptual map. Note the perceptual map in Figure 2.1. You will see this map quite often through the course of the simulation. The map measures size on the vertical axis and performance on the horizontal axis. Each axis extends from 0 to 20 units. The arrow in Figure 2.1 points to a product called Able with a performance measurement of 8.0 and a size of 12.0.

Market Segment Positions on the Perceptual Map

Market segments have different Positioning preferences. The Low End segment is satisfied with inexpensive products that are large in size and slow performing. It wants products that fall inside the upper-left set of dashed and solid circles in Figure 2.2. The High End segment wants products that are faster performing and smaller in size. It wants products that fall within the lower-right set of dashed and solid circles. Over time, your customers expect products that are smaller and faster. This causes the segments to move or drift a little each month. As the years progress, the locations of the circles significantly change. The example in Figure 2.3 shows the location of the market segments at the end of the fourth year. Figure 2.4 shows the segments at the end of the eighth year.

Figure 2.2	Figure 2.3	Figure 2.4
		
<p>Beginning Segment Positions: At the beginning of the simulation, segment positions are clustered in the upper-left portion of the perceptual map.</p>	<p>Segment Positions at the End of Year 4: The overlap between the segments decreases because the Low End and Traditional segments move at slower speeds.</p>	<p>Segment Positions at the End of Year 8: The segments have moved to the lower right; very little overlap remains.</p>
<p>These are examples! See your Industry Conditions Report for exact segment locations</p>		

Buying Criteria Per Segment

Buyers in each segment place a different emphasis upon the four buying criteria. For example, some customers are more interested in Price, while others are more interested in Positioning. Positioning and Price criteria change every year. Age and MTBF criteria always remain the same. Buying criteria for the previous year are reported in the Capstone Courier’s Segment Analysis pages. As you take over the company to make decisions for Round 1, your reports reflect customer expectations as of December 31, Round 0 (yesterday). The Industry Conditions Report displays the Round 0 buying criteria for each market segment. Here are two example segments.

Example 1: Customers seek proven products at a modest price.

- Age: 2 years – importance: 47%
- Price: \$20.00-\$30.00 – importance: 23%
- Ideal Position: Size 16.0/Performance 4.0 – importance: 21%
- MTBF: 14,000-19,000 – importance: 9%

Example 2: Customers seek cutting-edge technology in Size/Performance and new designs.

- Ideal Position: Size 11.1/Performance 8.9 – importance: 43%
- Age: 0 years – importance: 29%
- MTBF: 20,000-25,000 – importance: 19%
- Price: \$30.00-\$40.00 – importance: 9%

Capstone 2.0 Courier

Every round, you and your competitors will have access to an industry newsletter called the Capstone 2.0 Courier. The Courier is an extensive year-end report of the sensor industry. It includes customer buying patterns, product positioning, public financial records and other information that will help you get ahead. In business, knowledge is power. If you want to evaluate your company's performance or analyze your competitors, the Courier is the place to start. Customer survey scores for each product can be found in the Courier's Segment Analysis pages. These scores determine sales distribution. In general, the higher the score, the better the sales.

The Courier Reports the previous year's results. The Courier available at the start of Round 1 displays results for Round 0, when all companies were equal just after the monopoly's breakup. The Courier available at the start of Round 2 will display the results for Round 1. As the simulation progresses and strategies are implemented, results among the competing companies will begin to vary.

Proformas & Annual Reports

Proformas and Annual Reports are specific to your company. Proformas are projections for the upcoming year. Annual Reports are the results from the previous year.

The Proformas will help you envision the impacts of your pending decisions and sales forecasts, but are not meant to guarantee or replicate what will happen; they are merely estimates based on the decisions you have made. The Annual Reports will help you analyze last year's results.

Proformas are only available inside the simulation. They can be accessed through the top menu bar by clicking the Reports tab and then Proforma.

The Annual Reports can be accessed inside the simulation at the bottom of the Capstone 2.0 Courier report, or through the dashboard's left-hand navigation, by clicking Reports, and then Simulation Reports.

Managing your Company/Departments with Inter Department Coordination

It's time to unlock the doors and turn on the lights! Welcome to your company. Below, we will walk you through the mechanics of the company departments. Remember, entering decisions is the easy part; determining what decisions to enter requires some thought. This chapter will help you get started.

Every company starts the simulation with five sensor products. Your company has one product for each segment. You have one assembly line per product. New products can be created, and current products can be retired. Your company must have at least one product and cannot have more than eight. Your decisions, made every year on January 1, are carried out by your employees throughout the year.

Your simulation might also include additional modules and plug-ins. Your simulation dashboard will notify you if these decisions are scheduled.

Research and Development

The Research and Development (R&D) Department oversees invention and redesign. It develops the innovations needed to keep the company ahead of the competition. R&D is responsible for the “product” portion of the 4 P's of Marketing (“product, price, place and promotion”). This makes R&D an essential part of any marketing process. Your R&D Department invents new products and changes specifications for existing products. Changing size and/or performance repositions a product on the Perceptual Map. Improving performance and shrinking size moves the product towards the lower right on the map. Your R&D decisions are fundamental to your Marketing and Production plans.

In Marketing, R&D addresses:

- The Positioning of each product inside a market segment on the perceptual map
- The number of products in each segment
- The Age of your products
- The reliability (MTBF rating) of each product

In Production, R&D affects or is affected by:

- The cost of material
- The purchase of new facilities to build new products
- Automation levels – The higher the automation level, the longer it takes to complete an R&D project.

All R&D projects begin on January 1. If a product does not have a project already under way, you can launch a new project for that product. However, if a project begun in a previous year has not finished by December 31 of that year, you **will not** be able to launch a new project for that product (the decision entry cells in the R&D area of the simulation will be locked).

Changing Performance, Size, and MTBF

Repositioning moves an existing product from one location on the perceptual map to a new location, generally (but not always) down and to the right. Repositioning requires a new Size attribute and/or a new Performance attribute. To keep up with segment drift, a product must be made smaller (that is, decrease its Size) and better performing (that is, increase its Performance).

Positioning Costs

Positioning affects material costs. The more advanced the positioning, the higher the cost. At the beginning of the simulation, the trailing edge of the Low End fine cut has the lowest positioning cost of approximately \$1.00; the leading edge of the High End has the highest positioning cost of approximately \$10.00.

Reliability (MTBF) Costs

The Reliability rating, or MTBF, for existing products can be adjusted up or down. Each 1,000 hours of Reliability (MTBF) adds \$0.30 to the material cost. A product with 20,000 hours of Reliability includes \$6.00 in reliability costs:

$$(\$0.30 \times 20,000) / 1,000 = \$6.00$$

Improving Positioning and Reliability will make a product more appealing to customers, but doing so increases material costs.

Material costs displayed in the simulation web app and reports are the combined Positioning and Reliability (MTBF) costs.

Inventing Sensors

The simulation allows you to expand your product base by inventing new products. To do so, click the + icon in the Products bar, select a name from the drop-down list, and then enter the product's Performance, Size and MTBF. Of course, these specifications should conform to the criteria of the intended market segment.

All new products require Capacity and Automation, which should be purchased by the Production Department in the year prior to the product's revision (release) date. If you don't buy the assembly line the year prior to its introduction, you cannot manufacture your new product!

It is not possible to produce new products prior to the revision date. A new product with a revision date of July 1 will be produced in the second half of the year. The Capacity and Automation will stand idle for the first half of the year.

Project Management

Segment circles on the perceptual map move at speeds ranging from 0.7 to 1.3 units each year, depending on your simulation. You must plan to move your products (or retire them) as the simulation progresses. Generally, the longer the move on the perceptual map, the longer it takes the R&D Department to complete the project.

Project lengths can be as short as three months or as long as three years. Project lengths will increase when the company puts two or more products into R&D at the same time. When this happens each R&D project takes longer. Assembly line Automation levels also affect project lengths. R&D project costs are driven by the amount of time they take to complete. A six-month project costs \$500,000; a one-year project costs \$1,000,000.

Sensors will continue to produce and sell at the old Performance, Size and MTBF specifications up until the day the project completes, shown on the spreadsheet as the revision date. Unsold units built prior to the revision date are reworked free of charge to match the new specifications.

If the project length takes more than a year, the revision date will be reported in the next Capstone Courier. However, the new performance, size and MTBF will not appear; old product attributes are reported prior to project completion.

When products are created or moved close to existing products, R&D completion times diminish. This is because your R&D Department can take advantage of existing technology. If the module is active, TQM/Sustainability investments can also decrease R&D times. It is important to verify completion dates after all decisions have been entered. Usually you want repositioning projects to finish in less than a year. For example, consider breaking an 18-month project into two separate projects, with the first stage ending just before the end of the current year and the second ending halfway through the following year.

A Sensor's Age

It is possible for a product to go from an Age of 4 years to 2 years. How can that be? When a product is moved on the Perceptual Map, customers perceive the repositioned product as newer and improved, but not brand new. As a compromise, the perceived age is cut in half. If the product's Age is 4 years, on the day it is repositioned, its Age becomes 2 years. Therefore, you can manage the age of a product by repositioning the product. It does not matter how far the product moves. Aging commences from the revision date.

Changing the MTBF alone will not affect a product's age.

Age criteria vary from segment to segment. For example, if a segment prefers an Age of 2 years and the product's age approaches 3 years, customers will lose interest. Repositioning the product drops the Age from 3 to 1.5 years, and customers will become interested again.

To test this, log in to your simulation and start in Research & Development. To change a product's performance, update the Performance cell or slider; to change its size, update the Size cell or slider. To change the Reliability rating, update the product's MTBF. As you vary the specifications, observe the effect upon the revision date, project cost, material cost and Age.

Marketing

Marketing functions vary widely depending on the industry and company. In general, the department drums up interest in the company's products or services through a mix of activities. These can include advertising, public relations and good old-fashioned salesmanship. Your Marketing Department is concerned with the remaining P's (beyond R&D's product): price, place and promotion. Your Marketing Department is also in charge of sales forecasting.

Pricing Sensors

The first decision the Marketing department must make is to price each product. For starters, it's necessary to know that every segment has a \$10.00 price range. Customers prefer products—the ideal—towards the bottom of the range. Price ranges in all segments drop \$0.50 per year. For example, if in Round 0, Traditional customers expect a Price between \$20.00 and \$30.00, then in Round 1, the Traditional price range will be \$19.50- \$29.50; Round 2, \$19.00-\$29.00, etc. This puts pressure on companies to improve their cost structures.

Segment Price expectations correlate with the segment's position on the Perceptual Map, so Low Tech customers demand a lower product Price than High Tech customers. Segments that demand higher performance and smaller sizes are willing to pay higher Prices. To review, appeal falls to zero when Prices

go \$5.00 above or below the expected price range. Price drives the product's contribution to profit margin. Dropping the Price increases appeal but reduces profit per unit.

Promotion and Sales Budgets

Promotion and Sales budgets affect Customer Awareness and Accessibility. They also affect the Customer Survey Score.

Promotion

Each product's promotion budget determines its level of Awareness. A product's Awareness percentage reflects the number of customers who know about the product. An Awareness of 50% indicates half of the potential customers know it exists. From one year to the next, a third of those who knew about a product forget about it.

$$\text{Last Year's Awareness} - (33\% \times \text{Last Year's Awareness}) = \text{Starting Awareness}$$

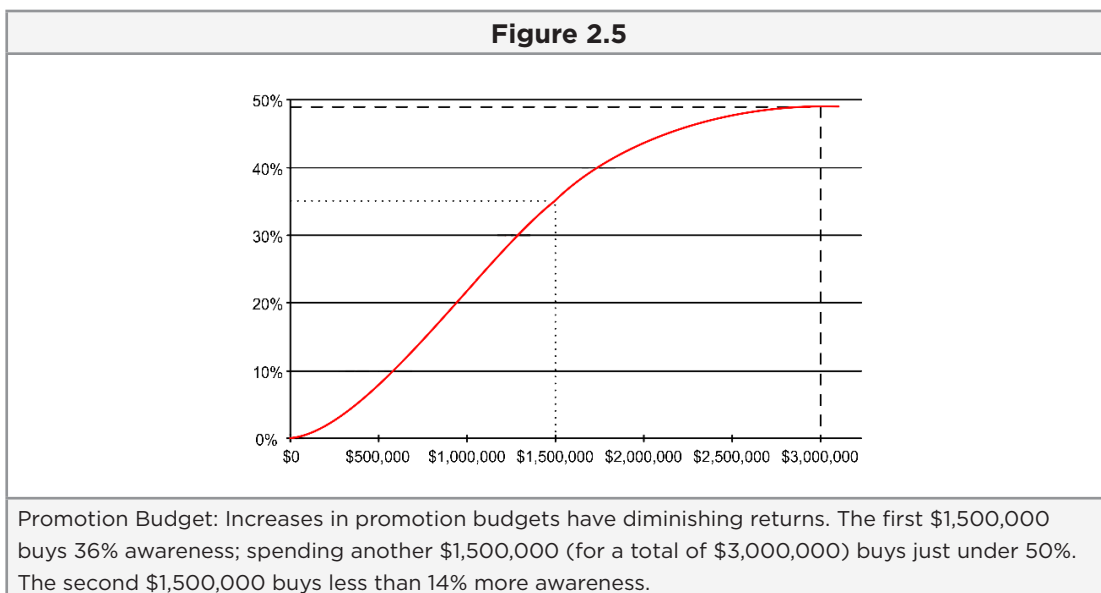

If a product ended last year with an Awareness of 50%, this year it will start with an Awareness of approximately 33%. This year's Promotion Budget would build from a starting Awareness of approximately 33%.

$$\text{Starting Awareness} + \text{Additional Awareness from Figure 4.2} = \text{New Awareness}$$

Figure 2.5 indicates a \$1,500,000 Promotion Budget would add 36% to the starting Awareness, for a total Awareness of 69% (33 + 36 = 69).

Figure 2.5 indicates a \$3,000,000 budget would add just under 50% to the starting Awareness, roughly 14% more than the \$1,500,000 expenditure (33 + 50 = 83). This is because further expenditures tend to reach customers who already know about the product. Once your product achieves 100% Awareness, you can scale back the product's Promotion Budget to around \$1,400,000. This will maintain 100% Awareness year after year.

New products are newsworthy events. The buzz creates 25% Awareness at no cost. The 25% is added to any additional Awareness you create with your Promotion Budget.

Sales

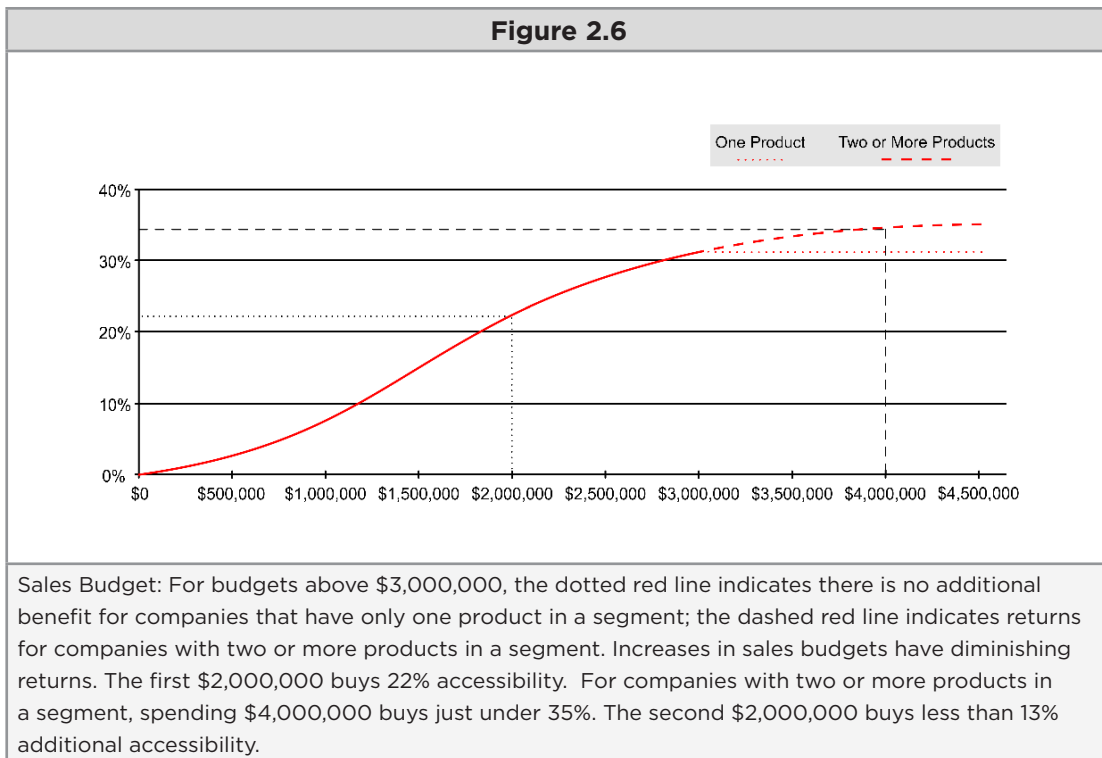

Each product's Sales Budget contributes to segment Accessibility. A segment's Accessibility percentage indicates the number of customers who can easily interact with your company via salespeople, customer support, delivery, etc. Like Awareness, if your Sales Budgets drop to zero, you lose one third of your

Accessibility each year. Unlike Awareness, Accessibility applies to the segment, not the product. If your product exits a segment, it leaves the old Accessibility behind. When it enters a different segment, it gets that segment's Accessibility.

If you have two or more products that meet a segment's fine cut criteria, the Sales Budget for each product contributes to that segment's Accessibility. The more products you have in the segment's circle, the stronger your distribution channels, support systems, etc. This is because each product's Sales Budget contributes to the segment's Accessibility.

If you have one product in a segment, there is no additional benefit to spending more than \$3,000,000. If you have two or more products in a segment, there is no additional benefit to spending more than a \$4,500,000 split between the products, for example, two products with sales budgets of \$2,250,000 each (see Figure 2.6).

Achieving 100% Accessibility is difficult. You must have two or more products in the segment's fine cut. Once 100% is reached, you can scale back the combined budgets to around \$3,500,000 to maintain 100%.

Awareness and Accessibility

Think of Awareness and Accessibility as “before” and “after” the sale. The Promotion Budget drives Awareness, which persuades the customer to look at your product. The Sales Budget drives Accessibility, which governs everything during and after the sale. The Promotion Budget is spent on advertising and public relations. The Sales Budget is spent on distribution, order entry, customer service, etc. Awareness and Accessibility go hand in hand towards making the sale. The former is about encouraging the customer to choose your product; the latter is about closing the deal via your salespeople and distribution channels.

Sales Forecasting

Accurate sales forecasting is a key element to company success. Manufacturing too many units results in higher inventory carrying costs. Manufacturing too few units results in stock outs and lost sales opportunities, which can cost even more.

To recap:

Log into the simulation and click Marketing. Use this area to determine each product's Price, Promotion Budget, Sales Budget and Sales Forecast.

Your Sales Forecast sets your own prediction of what you think will happen and shares it with your Production team. When you update your forecast, you will notice changes to your proforma financial statements.

The interface also displays the financial impacts of your decisions:

- Gross Revenue (Price multiplied by Your Forecast.)
- Variable Costs (Labor, material and inventory carrying costs subtracted from the Gross Revenue forecast.)
- Contribution Margin (Gross Revenue forecast minus Variable Costs.)
- Fixed Costs (Depreciation, R&D costs, Promotion Budget, Sales Budget and admin costs.)
- Net Margin (Contribution Margin forecast minus the product's Fixed Costs forecast.)

Production

For manufacturers, Production literally puts everything together. The department coordinates and plans manufacturing runs, making sure that products get out the door. In your Production department, each product has its own assembly line. You cannot move a product from one line to another because automation levels vary and each product requires special tooling.

As it determines the number of units to produce for the upcoming year, Production needs to consider the Sales Forecast developed by Marketing minus any inventory left unsold from the previous year (Inventory on Hand).

Your Production Department determines how many units will be manufactured during the year. It is also responsible for buying and selling production lines.

Capacity

First-shift Capacity is defined as the number of units that can be produced on an assembly line in a single year with a daily eight-hour shift. An assembly line can produce up to twice its first-shift Capacity by using a second shift. An assembly line with a Capacity of 2,000,000 units per year could produce 4,000,000 units with a second shift. However, second-shift labor costs are 50% higher than the first shift.

Each new unit of capacity costs \$6.00 for the floor space plus \$4.00 multiplied by the Automation rating. The simulation automatically calculates the cost and displays it for you. Increases in capacity require a full year to take effect – increase it this year, use it next year.

Capacity can be sold at the beginning of the year for \$0.65 on the dollar value of the original investment. You can replace the capacity in later years, but you have to pay full price. If you sell capacity for less than its depreciated value, you lose money, which is reflected as a write-off on your income statement. If your capacity has depreciated to lower than 65% of its original value, you will make a gain on the sale. This will be reflected as a negative write-off on the income statement.

The dollar value limit of capacity and automation purchases is largely determined by the maximum amount of capital that can be raised through stock and bond issues plus excess working capital. The decision area displays this amount.

Discontinuing a Sensor

If you decide to retire a product in the R&D page, Capstone interprets this as a liquidation instruction and will sell your remaining inventory for half the average cost of production, which is written off as a loss on your income statement. If you want to sell your inventory at full price, sell all but one unit of capacity (then once inventory is sold through, sell the last unit).

Automation

As automation levels increase, the number of labor hours required to produce each unit falls. The lowest automation rating is 1.0; the highest rating is 10.0.

At an automation rating of 1.0, labor costs are highest. Each additional point of automation decreases labor costs approximately 10%. At a rating of 10.0, labor costs fall about 90%.

Labor costs increase each year because of an annual raise in the workers' contract.

Despite its attractiveness, two factors should be considered before raising automation:

- Automation is expensive: At \$4.00 per point of automation, raising Automation from 1.0 to 10.0 costs \$36.00 per unit of capacity;
- As you raise Automation, it becomes increasingly difficult for R&D to reposition products short distances on the Perceptual Map. For example, a project that moves a product 1.0 on the map takes significantly longer at an automation level of 8.0 than at 5.0 (Figure 2.7). Long moves are less affected. You can move a product a long distance at any automation level, but the project will take between 2.5 and 3 years to complete.

Changing Automation

For each point of change in automation, up or down, the company is charged \$4.00 per unit of capacity. For example, if a line has a Capacity of 1,000,000 units, the cost of changing the automation level from 5.0 to 6.0 would be \$4,000,000.

Reducing Automation costs money. If you reduce Automation, you will be billed for a retooling cost. The net result is you will be spending money to make your plant less efficient. While reduced Automation will speed R&D redesigns, by and large it is not wise to reduce an automation level.

When considering Automation and its impact on cost, it is useful to consider the production process as a series of 10 tasks. If you were planning on making a cell phone, you could complete all 10 tasks yourself. This equates to an automation level of 1, as you (the labor unit) would be doing all the work, and there would be a very low level of automation (maybe an electric screwdriver).

If you bought a machine that automated the first 5 tasks, this is represented by an automation level of 5.

The higher your automation level, the longer it takes to retool your plant for product upgrades. This is especially important in high tech segments, where positioning near the cutting edge of technology is critical. Automate too much and the product designs cannot keep up with the evolving market.

Changes in Automation require a full year to take effect - change it this year, use it next year.

To recap:

Log into the simulation and click Production. Use this area to enter for each product:

- A Production Schedule
- Increases in first-shift Capacity (Put a positive number in Buy/Sell Capacity.)
- Decreases in first-shift Capacity (Put a negative number in Buy/Sell Capacity.)
- Changes in automation level (Enter a number in New Automation Rating.)

Finance

Your Finance Department makes sure your company has the financial resources it needs to run through the year. The department can raise money via one-year bank notes, 10-year bonds or stock issues. The department can also issue stock dividends, buy back stock or retire bonds before their due dates.

Production tells Finance if it needs money for additional equipment. If Finance cannot raise enough money, it can tell Production to scale back its requests or perhaps sell idle capacity.

The Finance Department acts as a watchdog over company expenditures. Finance should review Marketing and Production decisions, as well as cross-check Marketing's forecasts and pricing. Are forecasts too high or too low? Will customers be willing to pay the prices Marketing has set? Is Production manufacturing too many or too few units? Does Production need additional capacity? Has Production considered lowering labor costs by purchasing automation?

Corporate finance functions differ from company to company. Duties can include managing financial risk, determining borrowing levels or even simple check writing. In general, the department monitors the company's flow of money, the lifeblood of any business.

Your Finance Department is primarily concerned with five issues:

1. Acquiring the capital needed to expand assets, particularly plant and equipment. Capital can be acquired through:
 - Current Debt
 - Stock Issues
 - Bond Issues (Long Term Debt)
 - Profits
2. Establishing a dividend policy that maximizes the return to shareholders
3. Setting the Accounts Payable policy and Accounts Receivable policy
4. Driving the financial structure of the firm and its relationship between debt and equity
5. Selecting and monitoring performance measures that support your strategy

Finance decisions should be made after all other departments enter their decisions. After the management team decides what resources the company needs, the Finance Department addresses funding issues and financial structure.

One of the Finance Department's duties is to verify that sales forecasts and prices are realistic. Unrealistic prices and forecasts will predict unrealistic cash flows in the proformas. Finance can determine a range of possible outcomes for the year by changing (but not saving) Marketing's forecasts then rechecking the proformas. Lowering forecasts decreases revenue and increases inventory – worst-case; raising forecasts increases revenue and decreases inventory – best-case.

Finance can print the worst-case and best-case proformas, then compare them to next year's annual reports.

Current Debt

Your bank issues Current Debt in one-year notes. The Finance area in Capstone 2.0 displays the amount of Current Debt due from the previous year. Last year's Current Debt is always paid off on January 1. The company can "roll" that debt by simply borrowing the same amount again. There are no brokerage fees for Current Debt. Interest rates are a function of your debt level. The more debt you have relative to your assets, the more risk you present to debt holders and the higher the Current Debt rates.

As a general rule, companies fund short term assets like Accounts Receivable and inventory with current debt offered by banks.

Bankers will loan current debt up to about 75% of your Accounts Receivable (found on last year's balance sheet) and 50% of this year's inventory. They estimate your inventory for the upcoming year by examining last year's income statement. Bankers assume your worst case scenario will leave a three- to four-month inventory and they will loan you up to 50% of that amount. This works out to be about 15% of the combined value of last year's total direct labor and total direct material, which display on the income statement. Bankers also realize your company is growing, so as a final step bankers increase your borrowing limit by 20% to provide you with room for expansion in inventory and Accounts Receivable.

Bonds (Long-Term Debt)

All bonds are 10-year notes. Your company pays a 5% brokerage fee for issuing bonds. The first three digits of the bond, the series number, reflect the interest rate. The last four digits indicate the year the bond is due. The numbers are separated by the letter S, which stands for “series.” For example, a bond with the number 12.6S2024 has an interest rate of 12.6% and is due December 31, 2024.

As a general rule, bond issues are used to fund long term investments in capacity and automation.

Bondholders will lend total amounts up to 80% of the value of your plant and equipment (the Production Department’s capacity and automation). Each bond issue pays a coupon, the annual interest payment, to investors. If the face amount or principal of bond 12.6S2024 were \$1,000,000, then the holder of the bond would receive a payment of \$126,000 every year for ten years. The holder would also receive the \$1,000,000 principal at the end of the tenth year.

When issuing new bonds, the interest rate will be 1.4% over the current debt interest rates. If your current debt interest rate is 12.1%, then the bond rate will be 13.5%.

You can buy back outstanding bonds before their due date. A 1.5% brokerage fee applies. These bonds are repurchased at their market value or street price on January 1 of the current year. The street price is determined by the amount of interest the bond pays and your credit worthiness. It is therefore different from the face amount of the bond.

If you buy back bonds with a street price that is less than its face amount, you make a gain on the repurchase. This will be reflected as a negative write-off on the income statement.

Bonds are retired in the order they were issued. The oldest bonds retire first. There are no brokerage fees for bonds that are allowed to mature to their due date.

If a bond remains on December 31 of the year it becomes due, your banker lends you Current Debt to pay off the bond principal. This, in effect, converts the bond to Current Debt. This amount is combined with any other current debt due at the beginning of the next year.

When Bonds Are Retired Early

A bond with a face amount of \$10,000,000 could cost \$11,000,000 to repurchase because of fluctuations in interest rates and your credit worthiness. A 1.5% brokerage fee applies. The difference between the face value and the repurchase price will reflect as a gain or loss in the income statement’s fees and write-offs.

When Bonds Come Due

Assume the face amount of bond 12.6S2024 is \$1,000,000. The \$1,000,000 repayment is acknowledged in your reports and web application in the following manner: Your annual reports from December 31, 2024 would reflect an increase in current debt of \$1,000,000 offset by a decrease in long term debt of \$1,000,000. The 2024 web app will list the bond because you are making decisions on January 1, 2024, when the bond still exists. Your 2025 web app would show a \$1,000,000 increase in current debt and the bond no longer appears.

Bond Ratings

Each year your company is given a credit rating that ranges from AAA (best) to D (worst). In Capstone 2.0, ratings are evaluated by comparing Current Debt interest rates with the prime rate. If your company has no debt at all, your company is awarded an AAA bond rating. As your debt-to-assets ratio increases, your Current Debt interest rates increase. Your bond rating slips one category for each additional 0.5% in Current

Debt interest. For example, if the prime rate is 10% and your Current Debt interest rate is 10.5%, then you would be given an AA bond rating instead of an AAA rating.

Stock

Stock issue transactions take place at the current market price. Your company pays a 5% brokerage fee for issuing Stock. New Stock issues are limited to 20% of your company's outstanding shares in that year. As a general rule, Stock issues are used to fund long term investments in capacity and automation.

Stock price is driven by book value, the last two years' earnings per share (EPS) and the last two years' annual dividend. Book value is equity divided by shares outstanding. Equity equals the Common Stock and retained earnings values listed on the balance sheet. Shares outstanding is the number of shares that have been issued. For example, if equity is \$50,000,000 and there are 2,000,000 shares outstanding, book value is \$25.00 per share. EPS is calculated by dividing net profit by shares outstanding.

The Dividend is the amount of money paid per share to stockholders each year. Stockholders do not respond to Dividends beyond the EPS; they consider them unsustainable. For example, if your EPS is \$1.50 per share and your Dividend is \$2.00 per share, stockholders would ignore anything above \$1.50 per share as a driver of stock price. In general, dividends have little effect upon stock price. However, Capstone 2.0 is unlike the real world in one important aspect- there are no external investment opportunities. If you cannot use profits to grow the company, idle assets will accumulate. Capstone 2.0 is designed such that in later rounds your company is likely to become a cash cow, spinning off excess cash. How you manage that spin-off is an important consideration in the endgame, and Dividends are an important tool at your disposal.

You can buy back Stock. The amount cannot exceed the lesser of either:

- 5% of your outstanding shares, listed on page 2 of last year's Courier; or
- Your total equity listed on page 3 of last year's Courier.

You are charged a 1.5% brokerage fee to retire stock

Emergency Loans

Financial transactions are carried on throughout the year directly from your cash account. If you manage your cash position poorly and run out of cash, the simulation will give you an emergency loan to cover the shortfall. The loan comes from a gentleman named Big Al, who arrives at your door with a checkbook and a smile. Big Al lends you the exact amount of your shortfall. You pay one year's worth of current debt interest on the loan and Big Al adds a 7.5% penalty fee on top to make it worth his while.

For example, suppose the current debt interest rate is 10% and you are short \$10,000,000 on December 31. You pay one year's worth of interest on the \$10,000,000 (\$1,000,000) plus an additional 7.5% or \$750,000 penalty.

You do not need to do anything special to repay an emergency loan. However, you need to decide what to do with the Current Debt (pay it off, re-borrow it, etc.). The interest penalty only applies to the year in which the emergency loan is taken, not to future years. Emergency loans are combined with any current debt from last year. The total amount displays in the Due This Year area under Current Debt.

Emergency loans depress stock prices, even when you are profitable. Stockholders take a dim view of your performance when they witness a liquidity crisis.

Credit Policy

Your company determines the number of days between transactions and payments. For example, your company could give customers 30 days to pay their bills (Accounts Receivable) while holding up payment to suppliers for 60 days (Accounts Payable).

Shortening A/R (Accounts Receivable) lag from 30 to 15 days in effect recovers a loan made to customers. Similarly, extending the A/P (Accounts Payable) lag from 30 to 45 days extracts a loan from your suppliers.

The Accounts Receivable lag impacts the customer survey score. At 90 days there is no reduction to the base score. At 60 days the score is reduced 0.7%. At 30 days the score is reduced 7%. Offering no credit terms (0 days) reduces the score by 40%.

The Accounts Payable lag has implications for production. Suppliers become concerned as the lag grows and they start to withhold material for production. At 30 days, they withhold 1%. At 60 days, they withhold 8%. At 90 days, they withhold 26%. At 120 days, they withhold 63%. At 140 days, they withhold all material. Withholding material creates shortages on the assembly line. As a result, workers stand idle and per-unit labor costs rise.

To recap:

Log into the simulation and click Finance. Use this area to raise money:

- Current Debt (These are one-year loans.)
- Long Term Debt (These are 10-year bonds.)
- Issue Stock

As resources permit, companies can:

- Buy Back Stock
- Retire Bonds
- Issue Dividend

Finance also establishes Accounts Receivable (A/R) and Accounts Payable (A/P) policies.

Scoring

Balanced Scorecard

Your simulation includes a tool called the Balanced Scorecard, which measures performance across four categories:

- **Financial**
Includes profitability, leverage and stock price
- **Internal Business Process**
Ranks (among other measures) contribution margin, plant utilization and days of working capital
- **Customer**
Examines the company's product line, including how well it satisfies buying criteria and awareness/accessibility levels
- **Learning and Growth**
Evaluates employee productivity

The Internal Business Process and Customer perspectives can cross-check performance. Under Internal Business Process, a low score for Contribution Margin could indicate the company is unprofitable- the company should look at its costs and pricing. Under the Customer perspective, a poor Buying Criteria score suggests the company should consider R&D projects to improve the product line or price adjustments.

The simulation projects Balanced Scorecard results for the upcoming year (see the Proformas menu). Scores from previous years are available on the dashboard.

Deep Dive

Customer Survey Score

In any month, a product's demand is driven by its monthly customer survey score. Assuming it does not run out of inventory, a product with a higher score will outsell a product with a lower score.

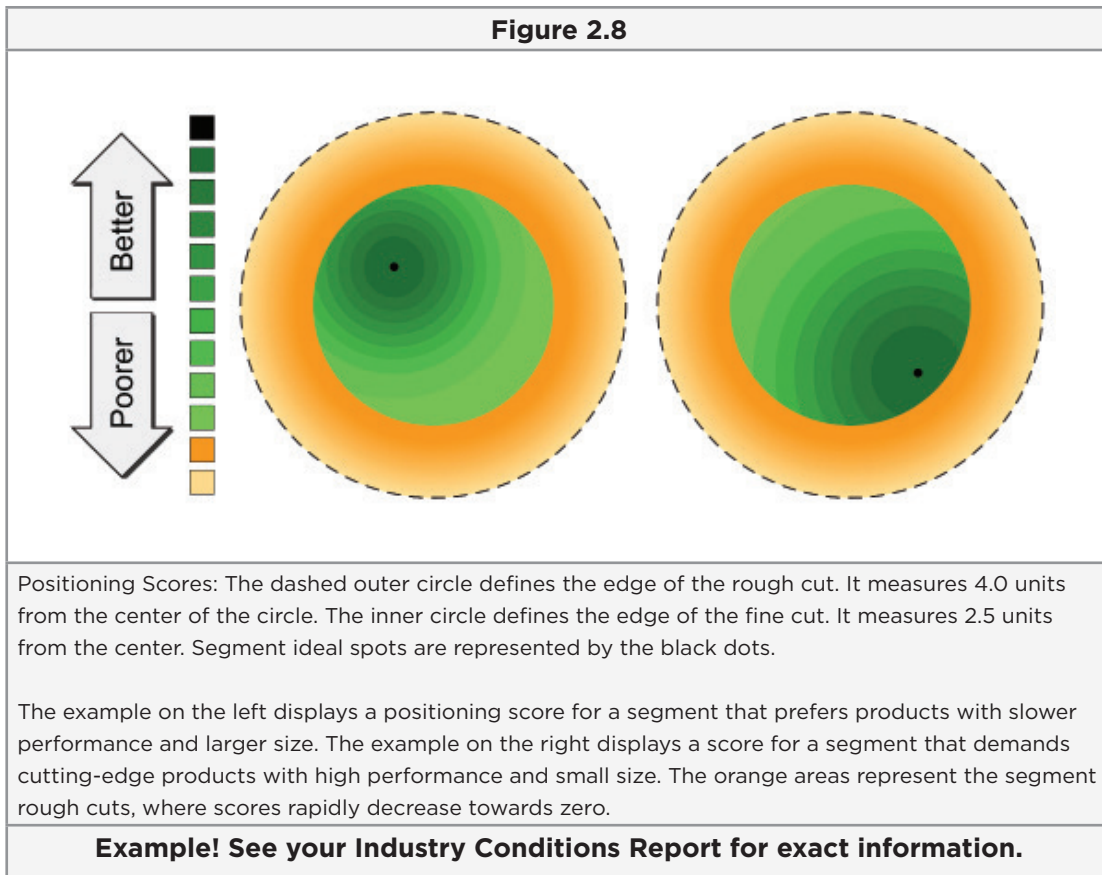

Customer survey scores are calculated 12 times a year. The December customer survey scores are reported in the Courier's Segment Analysis pages. A customer survey score reflects how well a product meets its segment's Buying Criteria. Company Promotion, Sales and Accounts Receivable policies also affect the survey score. Scores are calculated once each month because a product's Age and Positioning change a little each month. If during the year a product is revised by Research and Development, the product's Age, Positioning and MTBF characteristics can change quite a bit. As a result, it is possible for a product with a very good December customer survey score to have had a much poorer score—and therefore poorer sales—in the months prior to an R&D revision. Prices, set by Marketing at the beginning of the year, will not change during the year.

Buying Criteria and Customer Survey Score

The customer survey starts by evaluating each product against the buying criteria. Next, these assessments are weighted by the criteria's level of importance. For example, some segments assign a higher importance to Positioning than others. A well-positioned product in a segment where Positioning is important will have a greater overall impact on its survey score than a well-positioned product in a segment where Positioning is not important. The Industry Conditions Report and the Courier's Market Segment Analysis pages break down each segment's criteria in order of importance. A perfect customer survey score of 100 requires that the product: Be positioned at the ideal spot (the segment drifts each month, so this can occur only one month per year); be priced at the bottom of the expected range; have the ideal age for that segment (unless they are revised, products grow older each month, so this can occur only one month per year); and have an MTBF specification at the top of the expected range. Your customers want perfection, but it is impractical to have "perfect" products. In many cases you will have to settle for "great" products, but the better the products, the higher the costs. Your task is to give customers great products while still making a profit. Your competitors face the same dilemma.

Positioning score

Marketers must understand both what customers want and their boundaries. In terms of a product's Size and Performance (as discussed in "Section 2.1.5"), the perceptual map illustrates these ideas with circles. Each segment is described with a dashed outer circle, a solid inner circle and a dot we call the ideal spot (Figure 2.8).

Segment Circle

The circle defines the outer limit of the segment. Customers are saying, “I will NOT purchase a product outside this boundary.” Any product that falls outside of this is dropped from consideration. The segment circle has a radius of 4.0 units.

Ideal Spot

The ideal spot is that point in the heart of the customer segment where, all other things being equal, demand is highest.

Participants often ask, “Why are some ideal spots ahead of the segment centers?” The segments are moving. From a customer’s perspective, if they buy a product at the ideal spot, it will still be a cutting-edge product when it wears out. For contrast, if they buy a product at the trailing edge, it will not be inside the segment when it wears out. A product’s positioning score changes each month because segments and ideal spots drift a little each month. Placing a product in the path of the ideal spot will return the greatest benefit through the course of a year.

Segment Movement

Each segment moves across the perceptual map a little each month. In a perfect world, your product would be positioned in front of the ideal spot in January, on top of the ideal spot in June and trail the ideal spot in December. In December it would complete an R&D project to jump in front of the ideal spot for next year.

Segment Positioning

Products positioned away from the ideal spot will have reduced customer survey scores. The farther they are from the fine cut circle, the more the scores are reduced. Scores drop 99% for products that are almost to the edge of the circle, what we call the rough cut. Sensors that are about to enter the rough cut can be revised by Research & Development. The location of each segment’s rough cut and fine cut circles as of December 31 of the previous year appears on the perceptual map page of the Courier.

Pricing

Estimating the Customer Survey Score

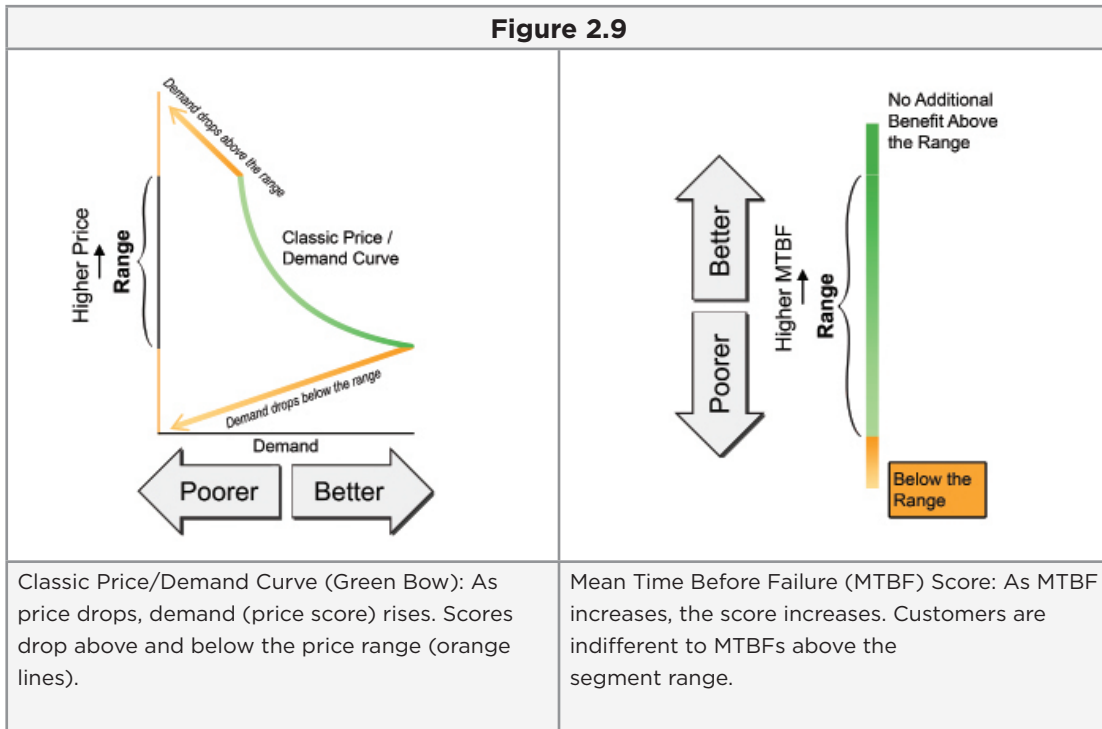

Every segment has a \$10.00 price range. Customers prefer products to be ideally towards the bottom of the range. Price ranges in all segments drop \$0.50 per year.

Segment price expectations correlate with the segment’s position on the Perceptual Map. Segments that demand higher performance and smaller sizes are willing to pay higher prices.

Price ranges for Round 0 (the year prior to Round 1) are published in the Industry Conditions Report and the Segment Analysis pages of the Capstone Courier.

Sensors priced \$5.00 above or below the segment guidelines will not be considered for purchase. Those products fail the price rough cut. Sensors priced \$1.00 above or below the segment guidelines lose about 20% of their customer survey score (orange lines, Figure 2.9). Sensors continue to lose approximately 20% of their customer survey score for each dollar above or below the guideline, on up to \$4.99, where the score is reduced by approximately 99%. At \$5.00 outside the range, demand for the product is zero (Under 1.00, but over the range, demand decreases accordingly).

Within each segment’s price range, price scores follow a classic economic demand curve (green curve, Figure 2.9): As price goes down, the price score goes up.

MTBF

Each segment sets a 5,000 hour range for MTBF (Mean Time Before Failure), the number of hours a product is expected to operate before it malfunctions. Customers prefer products towards the top of the range.

Demand scores fall rapidly for products with MTBFs beneath the segment's guidelines. Products with an MTBF 1,000 hours below the segment guideline lose 20% of their customer survey score. Products continue to lose approximately 20% of their customer survey score for every 1,000 hours below the guidelines down to 4,999 hours, where the customer survey score is reduced by approximately 99%. At 5,000 hours below the range, demand for the product falls to zero.

Within the segment's MTBF range, the customer survey score improves as MTBF increases. However, material costs increase \$0.30 for every additional 1,000 hours of reliability. Customers ignore reliability above the expected range- demand plateaus at the top of the range.

Estimating the Customer Survey Score

The customer survey score drives demand for your product in a segment. Your demand in any given month is your score divided by the sum of the scores. For example, if your product's score in April is 20 and your competitors' scores are 27, 19, 21 and 3, then your product's April demand is:

$$20 / (20+27+19+21+3) = 22\%$$

Assuming you had enough inventory to meet demand, you would receive 22% of segment sales for April.

What generates the score itself? Marketers speak of "the 4 P's"- price, product, promotion and place. Price and product are found in the Buying Criteria. Together they present a price-value relationship. Your promotion budget builds "Awareness," the number of customers who know about your product before sourcing. Your sales budget (place) builds "Accessibility," the ease with which customers can work with you after they begin sourcing. To the 4 P's we can add two additional elements- credit terms and availability. Credit terms are expressed by your Accounts Receivable (A/R) policy. Availability addresses inventory shortages.

Base Scores

To estimate the customer survey score, begin with the buying criteria available in the Courier's Segment Analysis reports. For example, suppose the buying criteria are:

- Age, 2 years- importance: 47%
- Price, \$20.00-\$30.00- importance: 23%
- Ideal Position, size 15.0 /performance 5.0- importance: 21%
- MTBF, 14,000-19,000- importance: 9%

A perfect score of 100 requires that the product have an age of 2.0 years, a price of \$20.00, a position at the ideal spot (15.0 and 5.0) and an MTBF of 19,000 hours.

The segment weighs the criteria at: Age 47%, Price 23%, Positioning 21% and MTBF 9%. You can convert these percentages into points then use these numbers to estimate a base score for your product. For example, Price is worth 23 points. The perfect Round 0 Price of \$20.00 would get 23 points, but at the opposite end of the price range, a Price of \$30.00 would only get one point.

However, the base score can fall because of poor Awareness (Promotion), Accessibility (Sales) or the credit terms you extend to your customers.

Accounts Receivable

A company's Accounts Receivable policy sets the amount of time customers have to pay for their purchases. At 90 days there is no reduction to the base score. At 60 days the score is reduced 0.7%. At 30 days the score is reduced 7%. Offering no credit terms (0 days) reduces the score by 40% (see "Credit Policy").

Awareness and Accessibility

After your product leaves the factory and enters the marketplace, the calculations for its score become less exact. The score will be affected by the level of the product's Awareness (the percentage of people who know about your product) and its segment's Accessibility (the number of customers who can easily interact with your company).

Awareness is built over time by the product's Promotion Budget. Promotion Budgets fund advertising and public relations campaigns.

Accessibility is built over time by the product's Sales Budget. Sales Budgets fund salespeople and distribution systems to service customers within the product's market segment. Similar products with higher awareness and accessibility will score better than those with lower percentages.

If the Total Quality Management module is enabled, some initiatives can increase the customer survey score.

Stock Outs and Seller's Markets

What happens when a product generates high demand but runs out of inventory ("stocks out")? The company loses sales as customers turn to its competitors. This can happen in any month.

The Market Share Report of the Courier can help you diagnose stock-outs and their impacts.

Usually, a product with a low customer survey score has low sales. However, if a segment's demand exceeds the supply of products available for sale, a seller's market emerges. In a seller's market, customers will accept low-scoring products as long as they fall within the segment's rough cut limits. For example, desperate customers with no better alternatives will buy:

- A product positioned just inside the rough cut circle on the Perceptual Map- outside the circle they say "no" to the product
- A product priced \$4.99 above the price range- at \$5.00 customers reach their tolerance limit and refuse to buy the product
- A product with an MTBF 4,999 hours below the range- at 5,000 hours below the range customers refuse to buy the product

Watch out for four common tactical mistakes in a seller's market:

1. After completing a capacity analysis, a company decides that industry demand exceeds supply. They price their product \$4.99 above last round's published price range, forgetting that price ranges fall by \$0.50 each round. Demand for the product becomes zero. They should have priced **\$4.49** above last year's range.
2. A company disregards products that are in the positioning rough cut. These products normally can be ignored because they have low customer survey scores. However, when the company increases the price, the customer survey score falls below that of the products outside the center of the segment circles, which are suddenly more attractive than their product.

3. The company fails to add capacity for the next round. A seller's market sometimes appears because a competitor unexpectedly exits a segment. This creates a windfall opportunity for the remaining companies. (However, a well-run company will always have enough capacity to meet demand from its customers.)
4. How can you be sure of a seller's market? You can't, unless you are certain that industry capacity, including a second shift, cannot meet demand for the segment. In that case, even very poor products will stock out as customers search for anything that will meet their needs.

Forecasting

Forecasting requires a little math and a little logic. For example, does your forecast predict your product will acquire half a segment's sales when there are four or five products in the segment? Unless your product's Positioning, Age and MTBF are significantly superior to the other products and your Price is at the low end of the range, it is not likely that you will acquire half the sales. Does your forecast predict you will take only one tenth of the sales when there are four or five products in the segment? Unless your product's Positioning, Age and MTBF are significantly inferior and your Price is at the high end of the range or above, chances are you can sell more.

Forecasts are used by the proformas to calculate financial projections. If you enter a forecast that is unrealistically high, the proformas will take that forecast and project unrealistic revenue.

If you do not enter values in the Your Forecast section, the proformas will use the Computer Prediction to project financial results.

Basic Forecasting Method

Last year's sales can be a good starting point for this year's forecasts. For example, if the segment growth rate for the upcoming year is 9.2%, you can say, "All things being equal, we can expect to sell 9.2% more units this year than last year."

Assume next year's growth rate for Traditional is 9.2% and your Traditional product sold 1,100,000 units last year without stocking out (running out of inventory):

$$1,100,000 \times 0.092 = 101,200$$

Adding 101,200 to last year's sales of 1,100,000 units gives you a starting forecast for the upcoming year of 1,201,200 units. The statistic boxes on the Segment Analysis reports of the Courier publish last year's industry unit demand and the growth rate for the upcoming year. Multiplying last year's demand by the growth rate then adding the result to last year's demand will determine this year's demand. Is this number valid? It is highly unlikely that the market in the upcoming year will be identical to the previous year. Prices will adjust, revision projects will complete- the playing field will change. Still, this number can be a good beginning as you assess your product offer and speculate what your competitors will offer. Keep in mind the possibility that your products sold because competitors who otherwise would have made sales under produced and stocked out. The Market Share report in the Courier displays actual and potential sales as a percentage for each product. If your actual sales far exceeded your potential because your competitors under produced, you cannot count on them making the same mistake again.

Any new products about to come to market must have a plant. Plant purchases are reported on the Production Analysis page of the Courier.

Qualitative Assessment

Compare your product to others competing within the segment and decide whether it is better or worse than the competition. Start with the Courier perceptual map. It shows where products are currently placed. The revision dates at the bottom of the page reveal the timing of any future repositionings. Continue the comparison using the Courier's Segment Analysis pages. These report each product's:

- Age- does the product satisfy customer age demands?
- MTBF- is reliability near the top of the range?
- Price- will price trends continue or will new automation facilitate a price reduction? (Remember, price ranges drop \$0.50 per year.)
- Awareness and Accessibility- are these percentages leading, keeping pace with or falling behind other products?

All these elements contribute to the monthly customer survey.

December Customer Survey Score

Will your product be better or worse than average? As an estimate, look at the December customer survey score in the lower part of each Segment Analysis. The Customer survey drives demand each month. For example, if there are four products in December scoring 32, 28, 22 and 14 (for a total of 96), then the top product's December demand would be 32/96 or 33%.

Top Product in Segment's Score / Sum of All Scores =

$$32 / (32 + 28 + 22 + 14) = 32 / 96 = 33\%$$

What monthly customer survey scores will your product have during the year? The score will change from month to month because the segments drift, your product ages and it might be revised. Each monthly score is driven by how well your product satisfies the segment buying criteria, plus its awareness and accessibility levels. If the TQM module is on, some initiatives could increase the score. Consider whether or not the top products in the segment can meet customer demand. On the Production Analysis, examine the top products' capacities. Can they manufacture sufficient units? If not, you could have an opportunity to exploit.

Forecasts, Proformas and the December 31 Cash Position

On the proforma income statement, sales revenue for each product is based on its price multiplied by the lesser of either:

- Your Forecast
- The total number of units available for sale (that is, the Production Schedule added to inventory).

When a forecast is less than the total number of units available for sale, the proforma income statement will display an inventory carrying cost. When a forecast is equal to or greater than the number of units available, which predicts every unit will be sold, the carrying cost will be zero. The simulation charges a 12% inventory carrying cost. On the proforma balance sheet, under current assets, inventory reflects the dollar value of all unsold units. Cash reflects the amount left after all company payments are subtracted from the sum of:

- Total sales revenue reported on the proforma income statement; and
- Stock, current debt and long-term debt entries in the Finance area.

The proforma balance sheet's cash position also displays as the Finance spreadsheet's December 31 cash position. Therefore, unrealistically high forecasts or prices will create cash predictions that are not likely to come true.

Worst Case/Best Case

If you wish, you can enter sales forecasts and production schedules that develop worst-case/best-case scenarios. Here is an example:

You generate a pessimistic forecast of 1,200,000 for your Traditional product, which predicts in the worst case monthly sales of 100,000 units. As a matter of policy, your management team might decide that manufacturing an additional three months' worth of inventory, or 300,000 units, is an acceptable risk when compared to the potential reward of making extra sales.

In the Marketing page, enter the worst case forecast of 1,200 in the Your Forecast cell. In the Production page, enter the best case of 1,500 for the Production Schedule (if inventory remains from the previous year, be sure to subtract that from the 1,500). At the end of the year, in the worst case you will have sold 1,200,000 units and have 300,000 units in inventory. In the best case you will have sold 1,500,000 units and have zero inventory.

The spread between the positions will show up as inventory on your proforma balance sheet. Your proforma income statement will also reflect the worst case for sales. In the Finance area, if the December 31 cash position is negative, adjust current debt, long-term debt and stock issue entries until the December 31 cash position becomes positive. This will help ensure against an emergency loan.

To see your best case, return to the Marketing page and enter 1,500 for your Sales Forecast then review the December 31 cash position. The actual results should lie somewhere between the worst and best cases.

Advanced Modules

Additional Modules

Some simulations use additional modules. If a module is scheduled, the simulation Dashboard will tell you the round it is set to begin and provide a link to the documentation.

The HR (Human Resources) and TQM (Total Quality Management) modules described below are frequently enabled. HR and TQM decisions are used by the Balanced Scorecard, which is the key simulation assessment methods.

HR

The Human Resources module has been added to your course, so you now have the ability to invest in the people that run your company. When the Human Resources module is active, you will see decisions appear in a new department, aptly titled Human Resources. With Human Resources active, you have the opportunity to invest in three areas of your company: Research & Development, Marketing, and Production. There are three total decisions that you can choose to invest in.

Decisions

Manufacturing – Training & Assembly Teams

Determine the investment in training your manufacturing employees to work in assembly teams. Assembly teams are known to increase productivity and quality, which increases production after adjustment. Employees also prefer to work in teams, which reduces turnover. Each round you can invest up to \$2 million to train your manufacturing staff to work in a more effective manner.

Scientists – Recruitment & Retention

Determine how much you will spend to recruit and retain scientists to work on new R&D projects for your company. This will impact how quickly you release new products and product updates, as well as how customers perceive the quality of your products. Each round you can invest up to \$2 million to attract and retain scientists to work on your sensors. The more you spend, the better the return will be.

Sales – Compensation

Determine how much you will compensate your sales force. This decision will impact how accessible your products are to customers and your employee turnover. Each round you can invest up to \$2 million in additional compensation for your sales force.

TQM

The Total Quality Management (TQM) module has been added to your course, so you now have the option to invest in the people that run your company. When the TQM module is active, you will see decisions appear in a new department – Total Quality Management. With TQM active, you can reduce material, labor, and administrative costs, shorten the length of time required for R&D projects to complete, and increase demand for the product line. The impacts of the investments produce returns in the year they are made and in each of the following years. There are ten total TQM initiatives that you can choose to invest in, which you can see below. Your company needs to determine which initiatives best serve its purposes. If you are keeping automation levels low so R&D projects complete more quickly, you might want to invest in areas that lower labor costs (for example, Quality Initiative Training). If your company is competing in the high technology segments, with high material costs, you might consider initiatives that reduce material costs (for example, Continuous Process Improvement). To maximize the effect, companies should find complementary initiatives and invest in each of them. For example, to reduce material costs, companies should consider investing in both CPI Systems and GEMI TQEM Sustainability.

Decisions

Process Management Initiatives

The impacts of these initiatives improve business procedures, resulting in improved efficiencies and cost structures:

- **CPI (Continuous Process Improvement) Systems** - Reduces material cost and to a lesser degree labor costs.
- **Vendor/JIT (Just in Time [Inventory])** - Reduces material costs and administrative overhead.
- **QIT (Quality Initiative Training)** - Reduces labor costs.
- **Channel Support Systems** - Increases the effectiveness of the Sales Budget, and therefore demand.
- **Concurrent Engineering** - Reduces R&D cycle time, the time needed to move sensors on the perceptual map and to change MTBF specifications. R&D costs are determined by the length of time they require, therefore Concurrent Engineering also lowers R&D costs.
- **UNEP Green Program** - The United Nations Environment Program increases the effectiveness of the Sales Budget (customers prefer products made by socially responsible manufacturers), and therefore increases demand. Green programs also reduce waste and therefore material costs.

TQM Initiatives

The impacts of these initiatives improve product quality while reducing the time and resources required to design, manufacture, warehouse and ship products.

- **Benchmarking** - Reduces administrative overhead.
- **Quality Function Deployment Effort** - Reduces R&D cycle time and enhances the effectiveness of the Promotion and Sales Budgets.
- **CCE (Concurrent Engineering)/6 Sigma Training** - Reduces material costs and labor costs.
- **GEMI TQEM Sustainability** - The Global Environmental Management Initiative Total Quality Environmental Management initiative reduces labor costs as it minimizes environmental risks. These include production methods which protect employee health and redesign of products to have fewer toxic by-products. The initiative also reduces material costs, as it promotes recycling and other material use efficiencies.

For each impact, complementary initiatives combine to increase the total effect. You should bundle your investments in multiple initiatives that have an impact important to your company's strategy. By spreading your investment among complementary initiatives, you can invest more in each impact than the limit of \$2,000,000 for an individual initiative.

You can target multiple impacts, such as both material and labor cost reduction; this can be a substantial investment in any given year. As you fine tune your decisions, keep an eye on the projected cumulative impacts to ensure that your investments are creating cost-effective returns.

Companies that invest in the same initiatives over two or three rounds (depending on the amount of money) will experience decreasing and eventually no additional returns for their investments.

Reports

Proformas & Annual Reports

Proformas and annual reports are specific to your company. Proformas are projections for the upcoming year. Annual reports are the results from the previous year. The proformas will help you envision the impacts of your pending decisions and sales forecasts. The annual reports will help you analyze last year's results. Proformas are only available inside the simulation. They can be accessed through the top menu bar by clicking the Reports tab and then Proforma. The annual reports can be accessed inside the simulation at the bottom of the Capstone 2.0 Courier report, or through the dashboard's left-hand navigation, by clicking Reports, and then Simulation Reports.

Proformas and Annual Reports

Proformas and annual reports include:

- Balance Sheet
- Cash Flow Statement
- Income Statement

Proformas are projections of results for the upcoming year. Annual reports are the results from the previous year. The proformas allow you to assess the projected financial outcomes of your company decisions entered in the Capstone Spreadsheet.

The proforma reports are only as accurate as the marketing sales forecasts. If you enter a Forecast that is unrealistically high, the proformas will take that forecast and project unrealistic revenue.

Balance Sheet

The balance sheet lists the dollar value of what the company owns (assets), what it owes to creditors (liabilities) and the amount contributed by investors (equity). Assets always equal liabilities and equity.

$$\text{Assets} = \text{Liabilities} + \text{Equity}$$

Assets are divided into two categories, current and fixed. Current assets are those that can be quickly converted, generally in less than a year. These include inventory, accounts receivable and cash. Fixed assets are those that cannot be easily converted. In the simulation, fixed assets are limited to the value of the plant and equipment.

Liabilities include accounts payable, current debt and long-term debt. In the simulation, current debt is comprised of one-year bank notes; long term debt is comprised of 10-year bond issues. Equity is divided into common stock and retained earnings.

Retained earnings are a portion of shareholders' equity. They are not an asset.

Common stock represents the money received from the sale of shares; retained earnings is the portion of profits that was not distributed back to shareholders as dividends, but was instead reinvested in the company.

Depreciation is an accounting principle that allows companies to reduce the value of their fixed assets. Each year some of the value is "used up." Depreciation decreases the firm's tax liability by reducing net profits while providing a more accurate picture of the company's plant and equipment value.

Depreciation is expensed, product by product, on the income statement. Total depreciation for the period is reflected as a gain on the cash flow statement. On the balance sheet, accumulated depreciation is subtracted from the value of the plant and equipment. The simulation uses a straight line depreciation method calculated over fifteen years.

Cash Flow Statement

The cash flow statement indicates the movement of cash through the organization, including operating, investing and financing activities. The annual report's cash flow statement shows the change in the amount of cash from the previous year. The proforma cash flow statement indicates the expected change at the end of the upcoming year.

Income Statement

Your company can use the income statement to diagnose problems on a product-by-product basis. Sales for each product are reported in dollars (not the number of products). Subtracting variable costs from sales determines the contribution margin. Inventory carrying costs are driven by the number of products in the warehouse. If your company has \$0 inventory carrying costs, you stocked out of the product and most likely missed sales opportunities. If your company has excessive inventory, your carrying costs will be high. Sound sales forecasts matched to reasonable production schedules will result in modest inventory carrying costs.

Period costs are depreciation added to sales, general and administrative (SG&A) costs, which include R&D, promotion, sales and administration expenses. Period costs are subtracted from the contribution margin to determine the net margin. The net margin for all products is totaled then subtracted from other expenses, which in the simulation include fees, write-offs and, if the module is enabled, TQM/Sustainability costs. This determines earnings before interest and taxes, or EBIT. Finally, interest, taxes and profit sharing costs are subtracted to determine net profit.

Once your decisions are final, you can print your proforma income statement (click the printer icon). When the simulation advances to the next year, you can compare the results to your proforma projections.

The Capstone Courier

Customer purchases and sensor company financial results are reported in an industry newsletter called the Capstone 2.0 Courier.

The Courier is available from two locations:

- From the dashboard, click Simulation Reports
- From the Capstone 2.0 simulation interface, click the Reports menu

The Courier displays the previous year's results. The Courier available at the start of Round 1 displays last year's results for Round 0, when all companies have equal standing. The Courier available at the start of Round 2 will display the results for Round 1.

Successful companies will study the Courier to understand the marketplace and find opportunities. As the simulation progresses and strategies are implemented, company results will begin to vary.

Front Page

Use the first page of the Courier to see a snapshot of last year's results. Be sure to compare your company's sales, profits and cumulative profits with your competitors'.

Stock & Bond Summaries

The Stock and Bond Summaries (page 2) report stock prices and bond ratings for all companies. The page also reports the prime interest rate for the upcoming year.

Financial Summary

The Financial Summary (page 3) surveys each company's cash flow, balance sheet and income statements. This will give you an idea of your competitors' financial health. In-depth financial reports for your company are also available.

Production Analysis

The Production Analysis (page 4) reports detailed information about each product in the market, including sales and inventory levels, price, material and labor costs. Are you or your competitors building excess inventory? Excess inventory puts pressure on profits.

The Production Analysis also reports product revision dates. Does a competitor have a product with a revision date in the year after the year of the report? This indicates a long repositioning project that will possibly put that product into another segment.

If a revision date has yet to conclude, the Courier will report the product's current Performance, Size and MTBF. The new coordinates and MTBF will not be revealed until after the completion of the project.

Check your competitors' automation, capacity and plant utilization. Increases in automation reduce labor costs, and this could indicate competitors might drop prices for those products. Did a competitor reduce capacity? Selling capacity reduces assets. Running the remaining capacity at 150% to 200% can improve Return on Assets (ROA).

The Production Analysis will report the release date (but not the coordinates) of a new product if:

- Production capacity is purchased
- A promotion budget is entered
- A sales budget is entered.

Are your competitors investing in capacity and automation? The Production Analysis reports capacity and automation ratings for the upcoming round. The Financial Summary reports the cost of plant improvements for all companies.

Segment Analysis Reports

The Segment Analysis reports review each market segment in detail.

The Statistics box in the upper-left corner reports Total Industry Unit Demand, Actual Industry Unit Sales, Segment Percent of Total Industry and Next Year's Growth Rate. The Customer Buying Criteria box ranks the customer criteria within each segment:

- Ideal Position: The preferred product location, also called the ideal spot, as of December 31 of the previous year- ideal spots drift with the segments, moving a little each month;
- Price: Every year on January 1, price ranges drop by \$0.50- this is the price range from last year;
- Age: Age preferences stay the same year after year; and
- Reliability: MTBF requirements stay the same year after year.

Are your products meeting your buyers' expectations? The perceptual map shows the position of each product in the segment as of December 31 of the previous year. The Accessibility chart rates each company's level of Accessibility. Accessibility is determined by the Marketing Department's Sales Budget- the higher the budget, the higher the Accessibility. Accessibility is measured by percentage; 100% means every customer can easily interact with your company- sales, customer support, etc.

The Market Share Actual vs. Potential Chart displays two bars per company. The actual bar reports the market percentage each company attained in the segment. The potential bar indicates what the company deserved to sell in the segment. If the potential bar is higher than the actual, the company under produced and missed sales opportunities. If the potential is lower than the actual, the company picked up sales because other companies under produced and stocked out (ran out of inventory).

The Top Products in Segment area reports, in order of total sales:

- Market Share
- Units Sold to Segment
- Revision Date
- Stock Out (This tells you whether the product ran out of inventory.)
- Performance and Size Coordinates
- Price
- MTBF

Strategy

Six Basic Strategies

These six basic strategies can be the starting point for your own custom strategy.

Broad Cost Leader

A Broad Cost Leader strategy maintains a presence in all segments of the market. The company will gain a competitive advantage by keeping R&D, production and material costs to a minimum, enabling the company to compete on the basis of Price, which will be below average. Automation levels will be increased to improve margins and to offset second shift/overtime costs.

Mission Statement

Low-priced products for the industry: Our brands offer solid value. Our primary stakeholders are bondholders, customers, stockholders and management.

Broad Differentiator

A Broad Differentiator strategy maintains a presence in every segment of the market. The company will gain a competitive advantage by distinguishing products with an excellent design, high Awareness and easy Accessibility. The company will develop an R&D competency that keeps designs fresh and exciting. Products keep pace with the market, offering improved Size and Performance. Prices will be above average. Capacity will be expanded as higher demand is generated.

Mission Statement

Premium products for the industry: Our brands withstand the test of time. Our primary stakeholders are customers, stockholders, management and employees.

Niche Cost Leader (Low Technology)

A Niche Cost Leader Strategy concentrates primarily on the Traditional and Low End segments of the market. The company will gain a competitive advantage by keeping R&D, production and material costs to a minimum, enabling the company to compete on the basis of Price, which will be below average. Automation levels will be increased to improve margins and to offset second shift/overtime costs.

Mission Statement

Reliable products for low technology customers: Our brands offer value. Our primary stakeholders are bondholders, stockholders, customers and management.

Niche Differentiator (High Technology)

A Niche Differentiator strategy focuses on the high technology segments (High End, Performance and Size). The company will gain a competitive advantage by distinguishing its products with an excellent design, high Awareness, easy Accessibility and new products. The company will develop an R&D competency that keeps designs fresh and exciting. Products will keep pace with the market, offering improved size and performance. The company will price above average and will expand capacity as it generates higher demand.

Mission Statement

Premium products for technology oriented customers: Our brands define the cutting edge. Our primary stakeholders are customers, stockholders, management and employees.

Cost Leader with Product Lifecycle Focus

A Cost Leader with a Product Lifecycle Focus centers on the High End, Traditional and Low End segments. The company will gain a competitive advantage by keeping R&D, production and material costs to a minimum, enabling it to compete on the basis of Price. The Product Lifecycle Focus will allow the company to reap sales for many years on each new product introduced into the High End segment. Products will begin their lives in the High End, mature into Traditional and finish as Low End products.

Mission Statement

Reliable products for mainstream customers: Our brands offer value. Our primary stakeholders are bondholders, stockholders, customers and management.

Differentiator with Product Lifecycle Focus

A Differentiator with a Product Lifecycle Focus strategy concentrates on the High End, Traditional and Low End segments. The company will gain a competitive advantage with excellent design, high Awareness, easy Accessibility and new products. The company will develop an R&D competency that keeps designs fresh and exciting.

Products will keep pace with the market, offering improved size and performance. The company will price above average and will expand capacity as it generates higher demand.

Mission Statement

Premium products for mainstream customers: Our brands withstand the test of time. Our primary stakeholders are customers, stockholders, management and employees.
